

Additional Interim Study Requests

Rep. Craig Frank:

"A constituent called me this afternoon and explained that there have been some severe unintended consequences of a bill the legislature passed in the 2007 General Legislative Session. Mr. Malcolm Allen, CRNA from House District 57 explained that ever since this legislation was signed into law it has forced his premiums to dramatically increase, as well as, his healthcare services/coverage to decrease. A number of medications he, his wife, and son were taking have been excluded from the drug list and suitable generics are not available. This is a problem.

I know the Master Study Resolution has been finalized; however, if you would make a note of this situation and include it on the list of Interim Study Items for Legislative Management to consider for the 2010 Interim, I would appreciate it."

Rep. Carol Moss:

"Study Subsections 53-3-231(2)(a) and (8), which deny driver licenses to persons (until age 21) found to have any measurable blood, breath, or urine alcohol concentration in their bodies while operating a vehicle or motorboat."
